Eaton's RE Series IT Racks Deliver a Feature Rich, Affordable Solution

MORGES, Switzerland ... Power management company Eaton has launched the RE Series IT racks as part of its IT infrastructure solution offering. These highly-featured affordable racks are designed for network closet and small server room applications, and build on Eaton's popular existing range of racks for small, medium and large data centres. In a market segment that is traditionally light on features, the RE racks offer a rich set of features including casters, grounding kit, step-less positioning rails, U markings and quick release lockable sides as standard.

"The new RE Series IT racks have been designed specifically with value added resellers and system integrators in mind," said Steven Wechter, product manager, Eaton, EMEA. "When added to Eaton's existing RP series, we now have products that will suit every need. The RE series addresses small, value-oriented applications, while the RP series delivers a high-performance enclosure system for all application sizes."

Available in 27U and 42U heights, and 800mm and 1000mm depths, the cabinets can fit into confined spaces or can accommodate large amounts of IT equipment and cabling. The RE series is also available with glass or high flow perforated doors and can include a full range of airflow management and cable management accessories.
